

CLAIMS

The invention claimed is:

1. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first medication product contained within a first containment means;

a second dosage of a second medication product contained within a second containment means; and

the first containment means affixed by affixing means to the second containment means.

2. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first prescription pharmaceutical product or non-prescription nutritional supplement product contained within a first pill, capsule or gel cap;

a second dosage of a second prescription pharmaceutical product or non-prescription nutritional supplement product contained within a second pill, capsule or gel cap; and

the first pill, capsule or gel cap affixed by affixing means to the second pill, capsule or gel cap.

3. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first medication product contained within a first containment means;

a second dosage of a second medication product contained within a second containment means; and

the first containment means affixed by affixing means externally to the second containment means, with the first containment means and the second containment means so mutually affixed to each other to thereby constitute one containment means.

4. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first prescription pharmaceutical product or non-prescription nutritional supplement product contained within a first pill, capsule or gel cap;

a second dosage of a second prescription pharmaceutical product or non-prescription nutritional supplement product contained within a second pill, capsule or gel cap; and

the first pill, capsule or gel cap affixed by affixing means to the second pill, capsule or gel cap to constitute one capsule or gel cap.

5. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first medication product contained within a first containment means;

a second dosage of a second medication product contained within a second containment means; and

the first containment means affixed by affixing means externally to the second containment means, with the first containment means and the second containment means so mutually affixed to each other to thereby constitute one elongated containment means.

6. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first prescription pharmaceutical product or non-prescription nutritional supplement product contained within a first pill, capsule or gel cap;

a second dosage of a second prescription pharmaceutical product or non-prescription nutritional supplement product contained within a second pill, capsule or gel cap; and

the first pill, capsule or gel cap affixed by affixing means to the second pill, capsule or gel cap to constitute one elongated capsule or gel cap.

7. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first medication product contained within a first containment means;

a second dosage of a second medication product contained within a second containment means;

a third dosage of a third medication product contained within a third containment means; and

the said first containment means affixed by affixing means to the said second containment means and the said second containment means affixed to the said third containment means, but with the said first containment means not directly affixed to the said third containment means.

8. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first prescription pharmaceutical product or non-prescription nutritional supplement product contained within a first pill, capsule or gel cap;

a second dosage of a second prescription pharmaceutical product or non-prescription nutritional supplement product contained within a second pill, capsule or gel cap;

a third dosage of a third prescription pharmaceutical product or non-prescription nutritional supplement product contained within a third pill, capsule or gel cap;

the said first pill, capsule or gel cap affixed by affixing means to the said second pill, capsule or gel cap and the said second pill, capsule or gel cap

affixed to the said third pill, capsule or gel cap, but with the said first pill, capsule or gel cap not directly affixed to the said third pill, capsule or gel cap.

9. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first medication product contained within a first containment means;

a second dosage of a second medication product contained within a second containment means;

a third dosage of a third medication product contained within a third containment means; and

the said first containment means affixed by affixing means to the said second containment means and the said second containment means affixed to the said third containment means, but with the said first containment means not directly affixed to the said third containment means; and

the said first containment means so affixed by affixing means to the said second containment means, which is so affixed to the said third containment means such to thereby constitute one containment means.

10. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first prescription pharmaceutical product or non-prescription nutritional supplement product contained within a first pill, capsule or gel cap;

a second dosage of a second prescription pharmaceutical product or non-prescription nutritional supplement product contained within a second pill, capsule or gel cap;

a third dosage of a third prescription pharmaceutical product or non-prescription nutritional supplement product contained within a third pill, capsule or gel cap;

the said first pill, capsule or gel cap affixed by affixing means to the said second pill, capsule or gel cap and the said second pill, capsule or gel cap affixed by affixing means to the said third pill, capsule or gel cap, but with the said first pill, capsule or gel cap not directly affixed to the said third pill, capsule or gel cap to thereby constitute one capsule or gel cap.

11. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first medication product contained within a first containment means;

a second dosage of a second medication product contained within a second containment means;

a third dosage of a third medication product contained within a third containment means;

said first containment means affixed by affixing means to the said second containment means and the said second containment means affixed by affixing

means to the said third containment means, but with the said first containment means not directly affixed to the said third containment means; and

said first containment means so affixed by affixing means to the said second containment means, which is so affixed by affixing means to the said third containment means such to thereby constitute one elongated containment means.

12. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:

a first dosage of a first prescription pharmaceutical product or non-prescription nutritional supplement product contained within a first pill, capsule or gel cap;

a second dosage of a second prescription pharmaceutical product or non-prescription nutritional supplement product contained within a second pill, capsule or gel cap;

a third dosage of a third prescription pharmaceutical product or non-prescription nutritional supplement product contained within a third pill, capsule or gel cap;

the said first pill, capsule or gel cap affixed by affixing means to the said second pill, capsule or gel cap and the said second pill, capsule or gel cap affixed by affixing means to the said third pill, capsule or gel cap, but with the said first pill, capsule or gel cap not directly affixed to the said third pill, capsule or gel cap to thereby constitute one elongated capsule or gel cap.

13. The device of Claim 1 in which the said affixing means is transparent.

14. The device of Claim 2 in which the said affixing means is transparent.
15. The device of Claim 3 in which the said affixing means is transparent.
16. The device of Claim 4 in which the said affixing means is transparent.
17. The device of Claim 5 in which the said affixing means is transparent.
18. The device of Claim 6 in which the said affixing means is transparent.
19. The device of Claim 7 in which the said affixing means is transparent.
20. The device of Claim 8 in which the said affixing means is transparent.
21. The device of Claim 9 in which the said affixing means is transparent.
22. The device of Claim 10 in which the said affixing means is transparent.
23. The device of Claim 11 in which the said affixing means is transparent.
24. The device of Claim 12 in which the said affixing means is transparent.
25. The device of Claim 1 in which the said affixing means is translucent.
26. The device of Claim 2 in which the said affixing means is translucent.
27. The device of Claim 3 in which the said affixing means is translucent.
28. The device of Claim 4 in which the said affixing means is translucent.
29. The device of Claim 5 in which the said affixing means is translucent.

30. The device of Claim 6 in which the said affixing means is translucent.
31. The device of Claim 7 in which the said affixing means is translucent.
32. The device of Claim 8 in which the said affixing means is translucent.
33. The device of Claim 9 in which the said affixing means is translucent.
34. The device of Claim 10 in which the said affixing means is translucent.
35. The device of Claim 11 in which the said affixing means is translucent.
36. The device of Claim 12 in which the said affixing means is translucent.
37. The device of Claim 3 in which the said one containment means is transparent.
38. The device of Claim 3 in which the said one containment means is translucent.
39. The device of Claim 4 in which the said one capsule or gel cap is transparent.
40. The device of Claim 4 in which the said one capsule or gel cap is translucent.
41. The device of Claim 5 in which the said one elongated containment means is transparent.

42. The device of Claim 5 in which the said one elongated containment means is translucent.

43. The device of Claim 6 in which the said one elongated capsule or gel cap is transparent.

44. The device of Claim 6 in which the said one elongated capsule or gel cap is translucent.

45. The device of Claim 9 in which the said one containment means is transparent.

46. The device of Claim 9 in which the said one containment means is translucent.

47. The device of Claim 9 in which the said one capsule or gel cap is transparent.

48. The device of Claim 9 in which the said one capsule or gel cap is translucent.

49. The device of Claim 10 in which the said one capsule or gel cap is transparent.

50. The device of Claim 10 in which the said one capsule or gel cap is translucent.

51. The device of Claim 11 in which the said one elongated containment means is transparent.

52. The device of Claim 11 in which the said one elongated containment means is translucent.
53. The device of Claim 12 in which the said one elongated capsule or gel cap is transparent.
54. The device of Claim 12 in which the said one elongated capsule or gel cap is translucent.
